**TRANS-i ANNOUNCES RELEASE OF NEW TERMINAL OPERATING SYSTEM
TO U.S. MARKET**

Fort Lauderdale, FLORIDA - Trans-i Technologies, Inc. is pleased to announce the release of Trans Terminal, their new terminal operating system, to the U.S. market. Trans Terminal is an advanced integrated TOS system developed for the gate management and administration of small to medium container and bulk storage terminals. With escalating land costs and environmental restrictions, terminal operators worldwide face the same challenge — how to increase throughput utilizing existing facilities. This powerful system enables users to maximize operating efficiencies while achieving a clear competitive advantage in their markets.

This end-to-end solution supports all import and export cargo flow from full containers (FCL), consolidated cargo (LCL) and bulk cargo to Ro-Ro freight. Trans Terminal's robust features allow users to manage the entire shipping transaction in addition to the administration of equipment, storage and facilities planning utilizing a client facing, browser-based interface. Trans Terminal also enables the efficient control of import/export documentation, the receipt and transmission of cargo information and manifests from Customs, Port Terminals, Maritime Lines and Shipping Agents.

Modules:

- Terminal
- Commercial
- Empty Container Handling
- Trans Terminal Web
- Management Information
