TRANS-i TECHNOLOGIES LAUNCHES THEIR NEW WEB-BASED CLAIMS APPLICATION

Fort Lauderdale, FLORIDA - Web-based technology is enabling a new level of efficiency for managing the claims process. Fast, accurate resolution and payment determines customer satisfaction and loyalty. Trans-i Technologies, Inc., a provider of Web-based business solutions to the transportation and logistics community, developed Trans Claims with these goals in mind. Built utilizing Microsoft.NET technology, the system allows customers, surveyors and analysts to complete a wide range of functions in a real-time, secure environment anytime, anywhere in the world. The only requirement to easily access all available information is an Internet connection - dramatically cutting paper and administrative cost.

With the Trans Claims solution, data is entered once in a consistent electronic format, which saves time and greatly reduces errors that occur with labor-intensive, manual processes. Everyone involved in the claim process is linked to a central point online, regardless of where they are, with easy access to up-to-date information on claims status, conditions and other related data. All information entered into the system is automatically verified against the ocean carrier documents. With the time and manual labor saved using Trans Claims, carriers can deliver the level of responsiveness and value-added service their customers expect.

Trans Claims includes the following modules:

- Customers – for claims registration and status follow-up
- Claims Administrator
- Claims Analysts
- Claims Surveyors

Key features are survey request and submission, insurance policy verification and customized management reporting capabilities.
